This code will be centered
This is not centered
Now I am centering again
You can use left to align as well although left is the default.
You can also right align using the align clause.
This Web Page has a non white background because the background color was set to FFFFC2. Note that #FFFFFF is pure white and #000000 is pure black. I randomly put in 000BBB for the text and got a blue coloring.
For the list of different codes and colors, go to my Web site and look for a listing under colors. NOTE: The # in front of the color code is not required in HTML.
This gives me a large font
This gives me red text
Note that for standard colors, I can assign the color red to the font. For more subtle shades, I can use the code for that color or one of the names associated with it. Read about how colors are treated by browsers and true colors. In this example I used 00dd00 which gave me a shade of green.
Note that with the embedded style, I can have a semi-colon afer the last one or leave it out.

This gives me red text
Note that for standard colors, I can assign
the color red to the font. For more subtle shades, I can use the code for that color or one of
the names associated with it.
Read about how colors are treated by browsers and true colors. In this example I used
00dd00 which gave me a shade of green.
Note that with the embedded style, I can have a semi-colon afer the last one or leave it out.

Example
Set the text decoration for <h1>, <h2>, and <h3> elements:
h1 { text-decoration: overline; }
h2 { text-decoration: line-through; }
h3 { text-decoration: underline; }
Try it yourself »
Definition and Usage
The text-decoration property specifies the decoration added to text.
Note: In CSS3, the text-decoration property is a shorthand property for text-decoration-line, text-decoration-color, and text-decoration-style, but this is currently not supported in any of the major browsers.
Note: In CSS3 you can use the text-decoration-color property to change the color of the decoration, otherwise the color is the same as the color of the text.

• normal - The text is shown normally
• italic - The text is shown in italics
• oblique - The text is "leaning" (oblique is very similar to italic, but less supported)
Example
p.normal { font-style: normal; }
p.italic { font-style: italic; }
p.oblique { font-style: oblique; }
Try it yourself »
Font Size
The font-size property sets the size of the text.
Being able to manage the text size is important in web design. However, you should not use font size adjustments to make paragraphs look like headings, or headings look like paragraphs.
Always use the proper HTML tags, like <h1> - <h6> for headings and <p> for paragraphs.

<ul>
<li>Delivered by Abraham Lincoln</li>
<li>Delivered at Gettysburg, Pennsylvania</li>
<li>Delivered on November 19 ,1863</li>
</ul>
<p><a id="fulltext">Gettysburg Adddress</a><br><br>
"Fourscore and seven years ago our fathers brought forth on this continent a new nation,
conceived in liberty and dedicated to the proposition that all men are created equal.
Now we are engaged in a great civil war, testing whether that nation or any nation so
conceived and so dedicated can long endure. We are met on a great battlefield of that war.
We have come to dedicate a portion of that field as a final resting-place for those who
here gave their lives that that nation might live. It is altogether fitting and proper that
we should do this.
But in a larger sense, we cannot dedicate, we cannot consecrate, we cannot hallow this
ground. The brave men, living and dead who struggled here have consecrated it far above our
poor power to add or detract. The world will little note nor long remember what we say here,
but it can never forget what they did here. It is for us the living rather to be dedicated
here to the unfinished work which they who fought here have thus far so nobly advanced. It
is rather for us to be here dedicated to the great task remaining before us--that from
these honored dead we take increased devotion to that cause for which they gave the last
full measure of devotion--that we here highly resolve that these dead shall not have died
in vain, that this nation under God shall have a new birth of freedom, and that government
of the people, by the people, for the people shall not perish from the earth."
Abraham Lincoln</p>

Gettysburg Adddress

"Fourscore and seven years ago our fathers brought forth on this continent a new nation,
conceived in liberty and dedicated to the proposition that all men are created equal.
Now we are engaged in a great civil war, testing whether that nation or any nation so
conceived and so dedicated can long endure. We are met on a great battlefield of that war.
We have come to dedicate a portion of that field as a final resting-place for those who
here gave their lives that that nation might live. It is altogether fitting and proper that
we should do this.
But in a larger sense, we cannot dedicate, we cannot consecrate, we cannot hallow this
ground. The brave men, living and dead who struggled here have consecrated it far above our
poor power to add or detract. The world will little note nor long remember what we say here,
but it can never forget what they did here. It is for us the living rather to be dedicated
here to the unfinished work which they who fought here have thus far so nobly advanced. It
is rather for us to be here dedicated to the great task remaining before us--that from
these honored dead we take increased devotion to that cause for which they gave the last
full measure of devotion--that we here highly resolve that these dead shall not have died
in vain, that this nation under God shall have a new birth of freedom, and that government
of the people, by the people, for the people shall not perish from the earth."
Abraham Lincoln

In class exercise that needs to be done and sent to me.
In class link exercise
CIS122
CIS159
CIS250
CIS258
These are the things I want you to do:
1. Establish a link to the top of the page
2. Establish a link to CIS159 on this page
3. Establish a link to inclassbasicCSS.html which is in the sa
4. Establish a link to my home page

In class link exercise
CIS122
The course emphasizes the technical design, development and implementation of effective Web sites, and students learn what makes a Web site work effectively. The course teaches XHTML, HTML, and CSS and introduces JavaScript. It also introduces software to develop and maintain sites. Students develop and maintain their own web sites using these development techniques. In addition, students learn to work effectively with Internet navigation, access tools and analyze the techniques to attract viewers to their web site.
CIS159
The students in this course will learn to work with an open source database and a programming language to support the database. They will learn the concepts of creating a relational open source database, querying the database using standard query techniques including SQL and a programming language and maintaining the database. They will learn to use the database and accompanying programming language in the web environment.
CIS250
This course covers the creation of interactive Web sites. Students learn about CGI (Common Gateway Interface) and CGI scripts. The course teaches Perl and the unique features it offers to make effective CGI applications. Students learn about the protocols that govern Web communication. It also teaches other languages used in server processing such as ASP.NET. The course introduces students to XML (Extensible Markup language). Students also learn to develop server-side Internet databases that can be accessed from a Web site. Prequisite: CIS120, CIS122 or permission of the instructor.
CIS258
In this course, students write advanced programs and scripts for server-side Web development building on the framework laid in CIS47. They increase their abilities in languages learned and build their skills in languages currently used for Web site development. The Web sites they build support databases, data collection and passing, selection and advanced Web concepts. Sutents also familiarize themselves with the concepts involved in programming for interactive devices other than the web. Prerequisite: CIS250 or CIS159 or permission of the instructor.
These are the things I want you to do:
1. Establish a link to the top of the page
2. Establish a link to CIS159 on this page
3. Establish a link to inclassbasicCSS.html which is in the same directory
4. Establish a link to my home page
