**Vmware Verification**

This is not a graded assignment, but I do need verification that you've successfully logged into Vmware from home and that you've successfully logged into all virtual machines in your CIS131 folder.
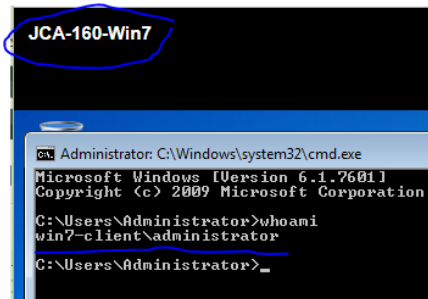

Please generate the following screenshots:

Note: All screenshots must be included within one word document and must be labeled with the respective question number.

1. Provide a screenshot which confirms that you've successfully logged into Vmware. The screenshot must include your CIS131 vmware folder and its contents. An example of what I'm looking for is presented here (The below screenshot shows a CIS160 folder but your folder should be CIS131)

2. A screenshot which confirms you've successfully logged in at the Windows 7 machine. The screenshot must confirm that you're at the Windows 7 virtual machine and who you're logged in as. There are many ways you can do this – my sample screenshot below includes the virtual machine name a command confirming who I am logged in as – something similar would suffice.

3. A screenshot which confirms you've successful logged in at the Windows 10 machine. The same screenshot confirmation as presented above needs to be provided for Windows 10.

4. A screenshot which confirms you've successful logged in at the Windows Server machine. The same screenshot confirmation as presented above needs to be provided for the server.

5. What Operating System are you using to connect to the vmware system?

6. What browser are you using?

7. Do you plan on taking this course totally online or do you plan on attending the lectures?
