

Laptop Users

If you're using a laptop to connect to the vmware server from home AND you're using that same laptop to connect to the vmware server while on campus, the easiest thing to do is to add the following lines to the hosts file (C:\windows\system32\drivers\etc\hosts):

```
50.205.180.23 srvvcenter-cis.bcc.local
```

```
10.131.0.50   srvvcenter-cis.bcc.local
```
